

CLAIMS

I claim:

1. A gardening scissor comprising:

a handle, a fixed jaw, a movable jaw, a linkage slab, a module board. The fixed jaw and module board are constructed of two separating boards available in seam between them. The features are as follows:

a hood, used to provide a protective cover on the seam, may be constructed of plastics.

The width of this hood is capable of providing cover on the seam, provided that the flexibility of fixed jaw and movable jaw is not hindered. The linkage side of hood is available with built-in edge, which is capable of inserting the inwall between two boards. Besides, the built-in edge and the inwall between two boards are provided with bulge strip and notch for positioning of hood.
